

SIGNATURE CELLS

High-quality, high-potency “Signature Cells”

More effective stem cells formulated by global leaders in stem cell therapy

All stem cells are not alike

Many clinics offer stem cell therapy, yet most seem to focus on just treatment. But what about the cells you receive? They’re not all alike.

Stem cells come from many sources, but at BioXcellerator, our formulations include mesenchymal stem cells (MSCs) from Wharton’s jelly in donated umbilical cords because they offer more therapeutic potential than other stem cells.

Perhaps more importantly, the way we select-and process cells before infusion makes therapy even more effective.

How we collect and formulate Signature Cells:

1. Strict donor criteria

The best cells come from the healthiest donors, so we strictly screen donors — accepting fewer than one out of 100 candidates.

2. Thorough testing and screening

After cells are donated, we test them to make sure they are free from any disease, such as HIV, STDs, hepatitis, and other disorders.

3. Detailed cell assessment

After screening, we assess cells to determine which are likely to be the very most effective. Our scientists have identified several specific proteins and genes that demonstrate:

- Highest level of anti-inflammatory properties
- Best potential immune modulating capacity
- Superior ability for regeneration and healing

4. Advanced processing and formulation technology

Once those few cells that meet our high standards are identified, they are purified and assessed again before they are reproduced into customized formulations of hundreds of millions of Signature Cells to be infused into patients.

Disclaimer: Stem cell therapy offers no guarantees and is not promoted as a cure. A review of the patient’s medical history is required to determine eligibility and approval for stem cell therapy. Any personal information provided is for internal and medical use with our medical providers only. BioXcellerator’s headquarters is located in Phoenix, Arizona, and is a resource company and provider network for BioXcellerator in Medellin, Colombia. BioXcellerator Arizona is not a stem cell treatment facility or surgical center. Treatments are not conducted in our offices or in the U.S. Because these advanced therapies are not yet approved by the FDA, all cell therapies are administered in Colombia, where they are regulated by the ministry of health, INVIMA, and other local authorities. All treatments are performed within the legal limits and regulatory framework for the country in which the specific medical provider practices.

Decades of experience

Our microbiology, biotechnology, and biomedical experts — including PhDs from top universities — have decades of experience culturing cells that meet our exceedingly high and precise standards for the most effective treatment.

About BioXcellerator

A World Leader in Stem Cell Therapy and Research

Backed by 22 years of clinically based stem cell science and research, BioXcellerator has successfully treated patients for sports and orthopedic injuries as well as autoimmune and degenerative diseases.

Our scientists and physicians have also developed advanced anti-aging, rejuvenation, and cosmetic treatments designed to transform your health, rejuvenate your entire body, and give you a more youthful appearance.

Remarkable results have brought many actors, actresses, and professional athletes to our state-of-the-art treatment center for these life-enhancing therapies — personalized for each patient for the best possible success.
